Company Overview

Comsearch has over 30 years of experience providing spectrum management and software and data solutions to the wireless markets. Our solutions focus on key areas of spectrum management including frequency planning and administration, monitoring and interference measurements, wireless engineering, and strategic consultation. Our experienced engineers, software products and information databases have addressed the specific challenges of network design and spectrum management for the wireless industry in both the commercial and government sectors.

Products and Services

Engineering Solutions—spectrum allocation assessments, frequency planning and coordination, FCC licensing, network planning, policy and regulatory assessments, sharing feasibility, microwave relocation, technology assessments, RF field measurements and site surveys, radiation safety assessment, interference troubleshooting, 70–90 GHz link registration and WMTS coordination.

Software & Data Solutions—iQ.link^{XG}, iQ.clearXGTM, Custom Telecom Data, GIS Data, AuctionPlannerTM, GeoPlannerTM, Marketing Information Reports, MAS ExpressSM, Microwave and Satellite Earth Station Information, Spectrum Utilization Studies, ULS ExpressSM, License Management Services, Vendor Competitive Information Reports, and Telecommunication Carrier and Holdings Reports.

Company History

Comsearch was founded in 1977 to address the prior coordination needs of the developing microwave network companies (e.g., MCI Telecommunications). In 1989, Comsearch was purchased by Alliance Telecommunications Corporation and simultaneously merged with Spectrum Planning, Inc. of Dallas. This merger combined the spectrum management expertise of Comsearch with the mobile and wireless experience of Spectrum Planning. In 1992, Comsearch was purchased by The Allen Group of Cleveland during their formation of the consortium of telecommunications companies known as the Allen Telecom Group. In 2003, Andrew Corporation acquired Allen Telecom. The combined company resulted in the number one global supplier of coaxial cables, RF power amplifiers, terrestrial microwave antennas, network geolocation solutions, and repeaters and in-building systems; and the number two global merchant provider of filters and base station antennas. In 2007, CommScope, Inc. (NYSE: CTV), announced its acquisition of Andrew Corporation. CommScope is a world leader in infrastructure solutions for communication networks, structured cabling systems for business enterprise applications, manufacturer of coaxial cable for broadband cable television networks, and one of the leading North American providers of environmentally secure cabinets for DSL and FTTN applications. As part of the new CommScope, Comsearch retains its brand name and is able to provide total end-to-end solutions as well as its traditional core services and solutions.

Clients

Comsearch's customer list includes: Lucent, Ericsson, MetroPCS, T-Mobile, U.S. Cellular, Verizon, Dobson Cellular, Harris, Hughes Space & Communications, Booz Allen Hamilton, ITT, Microsoft, Nokia, Vodafone, AT&T, KPN, Sprint, and several government agencies.
